# What Makes It Balance? Practice

Name: _____ Period: _____

Solve each equation. Decide: one solution, no solution, or infinitely many solutions.

**1** $2(x + 4) = 2x + 5$

**Solve it:**

**Solutions:** One solution x = _____ / Infinite solutions / No solutions

**2** $6 - x = 2(x + 6)$

**Solve it:**

**Solutions:** One solution x = _____ / Infinite solutions / No solutions

**3** $2(3x - 1) + 4 = 6x + 2$

**Solve it:**

**Solutions:** One solution x = _____ / Infinite solutions / No solutions

**4** $4x - 3 = 2(x + 1) - 5$

**Solve it:**

**Solutions:** One solution x = _____ / Infinite solutions / No solutions

**5** $3x - 7 - x = 2(x - 4)$

**Solve it:**

**Solutions:** One solution x = _____ / Infinite solutions / No solutions

**6** $-3x + 5 = -(3x - 5)$

**Solve it:**

**Solutions:** One solution x = _____ / Infinite solutions / No solutions

## Talk with your group

**Pick an equation where you wrote "infinitely many solutions." How many values of x make it true? Could you list them all? Why do we say "infinitely many" instead of "many"? Explain to your group.**
