What Makes It Balance?

Solve each equation, then compare with the slider.

Name: _____

Date: _____ Period: _____

1 $2x + 3 = x + 7$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

2 $3x + 2 = x - 4$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

3 $x + 5 = 4x + 1$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

4 $2x + 3 = 2x + 8$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

5 $4x + 2 = 4x - 6$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

6 $3x - 5 = 3x - 5$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

What Makes It Balance?

Solve each equation, then compare with the slider.

Name: _____

Date: _____ Period: _____

7 $5 + x + x = 2x + 5$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

8 $5x + 2 = 5x + 3$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

9 $3x + 4 = 4$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

10 $2x + 3 + x = 3x + 3$

Slider: Left heavier Right heavier Balanced

x is about _____ (or: none / all x)

Solve it:

Result: _____ = _____

11 $3x - 6 + x = 4x + 1$

My prediction: Never One value Always

because _____

Solve it:

Result: _____ = _____

12 $5x - 2 = 2x + 10$

My prediction: Never One value Always

because _____

Solve it:

Result: _____ = _____
